

FOR IMMEDIATE RELEASE

Overlake Hospital Medical Center Automates Time and Attendance Procedures with API's Payrollmation® System

Use of application minimizes manual processes, enhances reporting capabilities and helps managers control labor costs for increased operational efficiency

HARTFORD, Wis. — June 11, 2008 — api software, inc. (API), a provider of labor resource management solutions for healthcare organizations, today announced that Overlake Hospital Medical Center, a 337-bed facility based in Bellevue, Washington, has implemented its Payrollmation time and attendance system.

"After evaluating several solutions, we selected the Payrollmation system because of API's healthcare focus and unique understanding of the challenges we face on a daily basis," said Eric Teshima, controller at Overlake Hospital Medical Center. "The Payrollmation application eliminates the need for time-consuming data entry and cutting of manual checks each pay period, making payroll processing more efficient and reducing the chance for errors. In addition, managers have access to current time and attendance information at any point during the pay period, which helps facilitate more efficient utilization of staff resources."

API's Payrollmation system automates complex time and attendance data collection and calculation processes, ensuring that users consistently apply pay policies across the healthcare enterprise. Availability of real-time labor information allows managers and administrators to analyze data on a day-by-day or shift-by-shift basis for proactive control of labor costs. In addition, 24/7 online access to pay data and benefit balances enables employees to assume more responsibility for managing their personnel information, improving employee satisfaction and reducing payroll and managerial workload.

"We are pleased that Overlake Hospital Medical Center has selected API to automate its workforce management processes," said Luis Garcia, president and chief executive officer of API. "A distinguished and award-winning hospital, Overlake will benefit significantly from the increased productivity and reduced costs that our Payrollmation application provides, helping them to maximize efficiency throughout the organization."

About api software, inc.

api software, inc. is a leading provider of time and attendance, staffing and scheduling, payroll, human resource, productivity management, education tracking and access control software for healthcare organizations. Founded in 1982, API has more than 500 installations in the United States, with customers ranging in size from 500 employees to more than 30,000 employees.
